

AJA Provides Clean Water To Children Around the World

A.J. Antunes & Co. provides high-quality water to businesses around the world. Recently we began working with a nonprofit water relief organization, to bring clean, healthy drinking water to children in areas where it would otherwise not be available.

A little more than a year ago, a massive earthquake devastated central China and killed more than 90,000 people.

Villages were destroyed, and hundreds of displacement centers and schools were set up for the millions of men, women, and children who were left without homes. Although these sites had running water, it was severely contaminated because the earthquake damaged the water system.

With the help of this nonprofit organization, A.J. Antunes & Co. donated 30 VIZION water filtration systems and installed them in the centers and schools. Thanks to the efforts of many people, our systems continue to provide clean, healthy drinking water to

thousands of people as they rebuild their homes. Water issues also plague the country of Nepal, which has struggled with inadequate water supply and poor water quality, and a decade-long civil war left many families without homes.

A.J. Antunes & Co., along with the nonprofit organization, brought clean, healthy drinking water to the people of Nepal by donating and installing

VIZION water filtration systems in hospitals, schools, and orphanages throughout the country. At each location, new water stations were built with new sinks, tiles, and faucet outlet installed.

The VIZION water filtration systems offered by A.J. Antunes & Co., coupled with an ultra violet system, were an ideal fit for these situations. Requiring very little maintenance, our systems allow the people of China and Nepal to enjoy clean, safe drinking water without interruption.

Our Vision Statement

Every manufacturer promises quality, service, and solutions, but for A.J. Antunes & Co., it is part of our Vision Statement:

We exist to make our customers successful.

Our vision statement also includes the beliefs that we as a company uphold and adhere to on a daily basis: Integrity, People, Excellence, Passion, Family.

We as a company continually pursue excellence. We expect every solution, product, and service that we provide to consistently exceed the customers' expectations.

This dedication to excellence is evident in the way we work with customers. When a key customer experienced consistency problems with a steamer, they came to A.J. Antunes & Co. for a solution. Although the DFW-150 would have been a good fit for their stores, we wanted to find the perfect fit. So we worked with them and made several design changes to the DFW-150 to ensure it met all their specific needs.

By striving to find a solution that exceeded their expectations, we helped provide our customer with the product consistency needed for becoming a successful nationwide business.

Easy Access To Antunes

A.J. Antunes & Co. offers a wide range of different food service equipment, and two valuable tools provide instant access to all the important information on our equipment.

AutoQuotes is a downloadable electronic catalog that has a wealth of information on A.J. Antunes & Co. equipment and supplies. It includes pictures, sales sheets, product specifications, and pricing. Its database is constantly updated, ensuring all the information is current.

KCL CADalog is an electronic library that features all the engineering drawings for A.J. Antunes & Co. products. These drawings provide accurate and detailed views of our equipment, which can be vital to the process of designing a kitchen.

Versatility From Antunes Controls

Since 1955, Antunes Controls has designed and manufactured air and gas pressure switches. As a trusted leader in switch manufacturing, we'd like to introduce our recently released Versa Series.

The new Versa Series combines the accuracy, durability, and cost efficiency expected from Antunes Controls into a single design that is both powerful and compact. With integrated contacts and an omega-spring design, these switches provide repeatability as well as accuracy.

These innovative switches also feature a large knob that makes viewing and adjusting setpoints easier than ever. Available in a variety of mounting configurations, the Versa Series is sure to be a perfect fit.

Contact Antunes Controls to learn more information about the Versa Series.

An Easy Answer To Hard Water

Hard water is a problem that businesses as well as homes face on a daily basis. While many options for treatment exist, few are proven to be effective.

With the Template-Assisted Crystallization (TAC) system offered by VIZION, effectiveness isn't just a claim; it's proven.

Tested by an independent laboratory against the international protocol for scale prevention, the TAC system scored a 99.6% effectiveness rating—the highest rating of any technology.

The effectiveness of the TAC system comes from its state-of-the-art technology. Whereas a conventional ion exchange resin requires 90 seconds of contact time, the TAC system requires only 5 seconds. The TAC system also generates no water waste as it doesn't require backwashing or cleaning. Because it uses no salt or chemicals, it is also an environmentally friendly option for treating hard water.

Over the past six years, the efficiency of the TAC system has made it a valuable solution to water treatment problems. Its maintenance-free characteristics make it an ideal fit for foodservice and commercial applications. However, it is also perfect for residential use where restrictions prevent the use of conventional water softeners.

Did You Know...?

...79 percent of consumers say they enjoy eating out for breakfast? That's up from 53 percent in 2001, according to a 2008 study. More and more, people find themselves eating breakfast outside their homes, and A.J. Antunes & Co. has everything needed to provide consumers with a delicious start to the day.

It's easy to create a delectable breakfast sandwich with the MT-12 Muffin Toaster and ES-600 Egg Station. The MT-12 perfectly toasts a batch of 12 English muffin halves in mere minutes. With an internal sensor that monitors the temperature and adjusts the toasting time accordingly, this unit ensures each batch of English muffins will have a wonderful golden brown look.

The ES-600 is a combination unit for quickly creating a breakfast sandwich. It uses plain tap water to cook eggs and has a front grill section for reheating pre-cooked slices of meat. Easy to use and clean, this compact unit is ideal for operations of all sizes.

The VS-200A1 steamer is a simple way to serve hot and ready breakfast pastries in a moment's notice. This unit uses a specially designed needle plate to inject the inside of items with steam. With the push of a button, it creates irresistible cinnamon rolls and danishes that taste like they're straight out of the oven.
