

PRESS RELEASE

Filtered water is a necessity in today's world. It not only improves the quality of food and drinks, it also protects equipment. For over a decade, A.J. Antunes & Co. has been a leading supplier of the highest quality water filtration systems to the food service industry as well as to consumers.

A.J. Antunes & Co. aims to provide the highest quality water to the world, which is why it offers the most effective and least expensive filtration systems for premium ingredient water under the name VIZION.

The newest VIZION product release is the VZN series. These technologically advanced systems have a lower total cost of ownership and small footprint.

"The VZN systems maintain the same benefits as other VIZION systems but are configured to fit into any foodservice location," said Director of New Business Development Scott March.

The VZN systems assure healthy water by using self-cleaning ultra filtration ahead of low-cost carbon cartridges. This separation and self-cleaning extends the life of the cartridges and lowers the cost of ownership, which gives these systems a compelling return on investment.

The VZN systems also remove particles as small as .015 microns, 33 times smaller particles than the next best foodservice filtration system. This yields longer carbonation retention, and fewer service issues related to poor water quality.

These technologies are then followed by template-assisted crystallization (TAC) to protect your equipment against lime scale buildup. TAC reduces lime scale by 96-98% without the use of chemicals, which makes it an environmentally friendly solution.

"Not only will the new VZN systems save you money, they will also help the environment," added March.

VIZION systems have been installed all over the world and in many different consumable water applications, from fast-food restaurants to residential homes to airports to the Beijing Olympic Water Cube Building.

About A.J. Antunes & Co.

Based in Carol Stream, Ill., A.J. Antunes & Co. is a privately held and family run manufacturer with three divisions, a large product base, and a worldwide reputation for quality. The three divisions include Roundup, which manufactures countertop foodservice equipment; Antunes Controls, which manufactures OEM electronic controls and air and gas pressure switches; and VIZION, which manufactures point-of-entry and point-of-use consumable water filtration systems. A.J. Antunes & Co. also has a manufacturing facility in Suzhou, China, that distributes products primarily to the Asian market. For additional information, please visit www.vizionwater.com.
