TACO BELL TBS-1X AND TBS-2X STEAMERS

Service Bulletin #101 announced the new line of Taco Bell Steamers, models TBS-1X and TBS-2X. We failed to mention that unlike the older model Taco Bell Steamers (TBS-1RR and TBS-2RR), the new model steamer is voltage specific. In other words, the 1X and 2X are available in 2 voltage versions; 208 volt single phase and 240 volt single phase.

The 208 volt version cannot be used on any voltages over 219. The 240 volt version should not be used on voltages below 220. Please be sure to check the name plate and incoming power supply on any Taco Bell 1X and 2X unit you service. Note this on your warranty report. If the incoming voltage does not match the voltage on the identification plate, please notify the factory immediately.

We are enclosing an updated owner's manual (P/N 1010698) for your convenience. If you require additional copies, please order them from our Parts Department by part number.

The voltage of the unit can also be determined from the manufacturing number as follows:

<u>Manufacturing Number</u>	<u>Model Number</u>	<u>Voltage</u>
9100400	TBS-2X	208 volts
9100410	TBS-1X	208 volts
9100402	TBS-2X	240 volts
9100412	TBS-1X	240 volts

You may wish to note this information on the cover of the enclosed owners manual. Thank You.
